# ABOUT US

Established in 2018, Yava Farms is an integrated vegetable farm with:

- 5-acre irrigated vegetable production facility
- 2,000sqm greenhouse & nethouse, drip irrigation, and solar systems
- Pig production facility (60-capacity)
- Fish pond (2,000 catfish capacity)

Founded by Martin Agbodzie, the enterprise operates across three core areas: sustainable crop farming, agricultural consultancy, and capacity building/training. Our products include high-quality fresh vegetables such as cabbage, habanero & bell peppers. Services encompass farm setup, advisory support, market linkages, and agro-training/mentorship.

Yava Farms has built a strong customer base and serve as a model farm inspiring and mentoring young farmers.

# MISSION & VISION

To foster sustainable agriculture that ensures food security, creates employment, and empowers communities through knowledge transfer and innovative practices.

To become a leading agribusiness in Ghana, driving economic growth by making farming attractive, profitable, and resilient to climate change.

# THE PROBLEM

Despite our advancements investing significantly in modern farming technologies, the farm's production capacity remains underutilized, primarily due to limited working capital to meet input requirements, which in turn restricts both economic returns and the broader community impact of the enterprise.

At the same time, Yava Farms has nurtured a growing community of young women trainees who, through internships and national service placements, have developed strong skills and a keen interest in pursuing agriculture as a livelihood. However, their potential remains largely untapped due to limited access to land, inputs, and essential resources, preventing them from translating their training into sustainable agribusiness ventures.

# OUR SOLUTION

## The Agrisisters

A women-focused in-grower farming scheme designed to unlock the full potential of Yava Farms' irrigation facilities while empowering a new generation of female farmers.

### Under this Model, Yava Farms provides:

- Irrigated land and infrastructure
- Inputs (seeds, fertilizer) and technical support.
- Participants receive training and mentorship in climate-smart vegetable production.
- Guaranteed produce buy-back ensuring stable income.

**This inclusive model transforms underutilized assets into engines of job creation, income generation, and food security.**

## AgriSisters Program

EMPOWERING WOMEN,  
CULTIVATING PROSPERITY

# HISTORICAL FINANCIALS

	2022	2023	2024
Revenue (GHC)	368,469	999,100	865,073
